EDUCATION

B.A.Sc - Computer Engineering and Applied Mathematics, with Professional Internship

Queen's University

📅 Sept 2016 - May 2021

📍 Kingston, Ontario

EXPERIENCE

Senior Software Engineer, AI

Just Appraised

📅 Jul 2026 - Present

📍 Palo Alto, California

- Built a call routing system and parallel agentic voice agents on Twilio and ElevenLabs for deployments with > 100,000 calls a year.
- Build RAG-driven AI flows that answer resident questions over chat, phone, and email from each jurisdiction's knowledge base, records data, and an FAQ bank mined from past conversations, with prompts managed in Langfuse.
- Work as a forward deployed engineer on government launches in Texas and California, handling kickoff, phone setup, knowledge base builds, test calls, and customer communication through go-live.

AI Growth Engineer

Disco Education

📅 Sep 2023 - June 2026

📍 Toronto, Ontario

- Designed and developed the AI curriculum generation feature, the #1 driver of closed enterprise deals. Built a custom AI-Canvas interface with RAG pipelines and engineered agent flows that enables iterative course building through user interaction.
- Built and implemented a content system optimized for SEO and AI search, establishing Disco as a cited source in ChatGPT and Google AI Overviews and doubling site activity.
- Built a fully automated payment recovery pipeline that recovers tens of thousands of dollars per month in late payments with zero human intervention.
- Designed a full GTM automation stack using Claude, Make.com, and custom MCP integrations, covering lead enrichment, buyer intent alerting, and outbound sequencing across over 80k contacts.
- Led AI chat agent process parallelization, reducing response times by 75% and costs by 58% while improving response quality for end users.

Engineering Consultant

Stroud International

📅 Sep 2021 - August 2023

📍 Calgary, Alberta

- Led design working sessions to identify and develop opportunities to optimize project scope, reducing capital expenditure by \$300M+ for a clean hydrogen fuel production facility.
- Developed major logistics assessment and scheduling tools for the execution of a multi-million-dollar floating production storage and offloading vessel refurbishment project, reducing project delays by over a month.
- Led an improvement team to reduce downtime on two manufacturing lines by 35% over 8 weeks by identifying and implementing mechanical improvements and developing standard operating procedures.

Software Developer

Centre for Advanced Computing

📅 May 2019 - Nov 2020

📍 Kingston, Ontario

- Led a team of junior developers in the successful four-month development and launch of a mental health startup's web platform. Utilized Agile methodologies for iterative scope adjustment, exceeding client expectations and minimizing cost.
- Directed the design and full-stack development of a pilot AI-driven academic web platform, using React, Node.js, Docker, and Kubernetes, and integrated with IBM Watson and custom built quiz generation and tutor responses.
- Optimized and implemented natural language processing algorithms using Python for an NLP research project focused on the Mohawk language, integrated into a React application.

Chief Technical Officer

Queen's Space Engineering Team - Satellite Project

📅 April 2020 - May 2021

📍 Kingston, Ontario

- Led a team of 35 undergraduate engineering students in designing and building a micro satellite (CubeSat).
- Designed and developed a real-time satellite reaction wheel orientation control simulation with Simulink and MATLAB.
- Presented design plan at the Canadian Satellite Design Challenge, Critical Design Review 2019.

ADDITIONAL INFORMATION

- Programming: Python, TypeScript/JavaScript (Node, React), Java, Golang
- Tools: Git, LangChain/LangSmith, GPT, Stable Diffusion, LLMs, MATLAB, Claude, Cursor, ElevenLabs, Twilio, Langfuse
- Winner - Bose AR App Development at BostonHacks 2019, Secure IoT Hackathon 2020 - Pill-O-Talk product design
- Interests - Generative AI, Information Theory, Digital Education, Process Automation, AI Ethics
- Languages - English: Native (ILR Level 5), French: Professional Proficiency (ILR Level 4)
